4. **Housing**
5. **Sanitation/General Care**
6. **General Maintenance**
7. **Health Care**
8. **Special Section**
9. **Supplies Checklist**

### FUN FACT!

A budgie can have up to 3,000 feathers in total across their whole body. Budgies grind their beaks when they are happy and relaxed, similar to cats and purring! Budgerigars (also called Budgies or Parakeets) may be small and quiet birds, but they have huge personalities that will entertain you over and over again. They are a great pet for almost anyone who wishes for a bird they can tame and likes to play destructively.

### General Diet:

Parakeets are basically seed eaters in the wild so can be fed a diet in captivity that consists of many types of seeds as found in Parakeet Seed Mixes, and pelleted diets are available as well. It should be 70% seed and 30% pellet.

### **Vitamins/Supplements:**

Birds need a vitamin, mineral, and amino acid supplement added to their food everyday.

### **Treats/Extra Foods:**

Parakeets do well if given some vegetables and fruit along with their regular diet. These can include cooked or raw corn, peas, carrots, dark lettuces (no iceberg), beans, apples, raisins, and even some cooked pasta. Basically anything good for you is good for them (just avoid avocado, asparagus, and anything sugary, salty, or greasy). Seed treats such as millet and treat sticks are great for parakeets! Not only do they give extra nutrition but can keep a bird busy for hours!

### **Housing:**

Parakeets like a cage where they can flap their wings in easily, and the bigger the cage the better for the bird. Parakeets should be kept in cages that have bars no more than 3/8ths of an inch wide. Luckily, there are many colors and styles to choose from and can be matched to the area that it will be placed. One feed cup and one water cup are basics with the cage along with perches and a tray on the bottom. Cage paper or bird litter are best to use in the tray, and never use colored or regular newspaper, cedar shavings, or corn cob bedding. DO NOT place the bird cage near drafts, in the kitchen, or near any chemicals.

### **Sanitation/General Care:**

Every day scrub out the water dish with a light dishwashing detergent and rinse well. Birds eat their seed mix from the top, so take off the top layer of seed every day that has been eaten, and then add more new seed and mix thoroughly. Change seed completely every 2-3 days. The tray should be cleaned at least once a week or more often depending on cage size and the number of birds in the cage. Perches should also be cleaned off (washed if plastic, scraped if wooden) once a week or as needed. At least once a month, clean out the cage completely by washing the bars, base, tray, and all toys and accessories made of plastic or

### **General Maintenance:**

Most parakeets rarely need nail or beak trims, but owners should keep an eye on these just in case. Birds can also be offered special perches made out of a material that can help keep the nails short, and the bill is usually kept trimmed by the bird chewing on the beak conditioner and cuttlebone. Wings need to be trimmed every 4-6 months or the bird will be able to fly. For bathing, lightly mist your pet with a plant mister, or offer a bird bath, at least three times a week. We do offer Nail and Wing trimming - call to make an appointment. Only mist or offer a bath to your pet in the morning.

## Health Care:

Parakeets are generally very hardy and healthy birds and can live up to 8-10 years. They do not need any type of vaccines but should be checked by a veterinarian right away if they show any signs of illness such as lethargy, discharges, a change in their feces, or lack of appetite. Their cage should be kept in an area that is free from all drafts. Place the cage away from any vents, windows, or doors, and Kitchen. DONOT spray any air fresheners and/or pesticides etc near your bird.

## Special Section - Taming:

Young parakeets should always be handled quietly and gently at first when taming. Young birds that are being tamed should have their wings trimmed (which is just like having your hair cut, it does not hurt at all). Then it is best to work with them in a small, quiet area. Keep them close to the floor, as they will try to fly. When the bird is on the floor, push a finger slowly and gently against its lower chest. Once the bird is on, raise the hand and quietly talk to the bird. It may fly off a few times but be patient.

## Supplies Checklist

<input type="checkbox"/> Cage paper or bird litter wire cage	<input type="checkbox"/> Pelleted food
<input type="checkbox"/> Perches of at least three different diameters water bottle	<input type="checkbox"/> Mineral block bird gravel
<input type="checkbox"/> Vitamin/mineral/amino acid supplement treat dish	<input type="checkbox"/> Parakeet food Cuttlebone
<input type="checkbox"/> Toys, especially a mirror if the bird is kept alone
